## Installation

1. Select the place that the lamp can reach the sunshine, out off shadow.
2. Drill three holes on the suitable place, fix the mounted base by supplied Bolts.  
Fix the connector to the mounted base by nut.  
Place lamp on the connector as below picture.

## Operation

1. Please let the lamp head reach the sunshine about 1-2 days for the first time using to activate battery.
2. Switch the button to P or ON.  
P: PIR sensor activated model. It will be low bright without person. will be high bright while person passing.  
ON: always high bright.
3. Automatically turn on at dusk and off dawn.

Remark: There's light control sensor on the cap, it will not light up when other light sources cover the cap.
