

Dog cooling coat instruction

D09-001

ICE BEAR Dog Cooling Coat use the latest Microperforation and Cooling fibre technology to offer the best cooling garments available for dog today. As we know, Dogs can't sweat. They pant to regulate their body temperature. The hotter it gets, the harder they have to work to keep themselves cool. Dogs just want to chill. They'll need extra help during the warmer months to keep them staying cool.

ICE BEAR Dog Cooling Coat is the comfortable and safe way to combat overheating, reduce fatigue, prevent heat stress and alleviate dehydration. Simply moisten coat with cold water. It is made with cooling fibre and unique surface layer with microperforations. The middle layer is high water absorption capacity. It allows to retain moisture for hours longer than traditional cool coats. ICE BEAR Dog Cooling Coat has a microperforation built in, so your dog can stay cool on the go!

To activate the cooling coat simply submerge in cold water for about a minute, wring out excessive water and it is ready to wear.

- Latest Microperforation and Cooling fibre technology, so your dog can stay cool on the go!
- Reduces heat stress and fights fatigue
- Keeps your dog cool for hours
- Simply moisten it with water
- Anti-bacterial and easy to use
