Connect the opposing panels (there are 2 pairs of panels connected already) by simply hooking to corresponding panel (set on flat surface to be sure all panels are aligned correctly). Once hooked together, crimp hooked end tight [use a long nose pliers (NOT INCLUDED) over a cloth to prevent scratching]

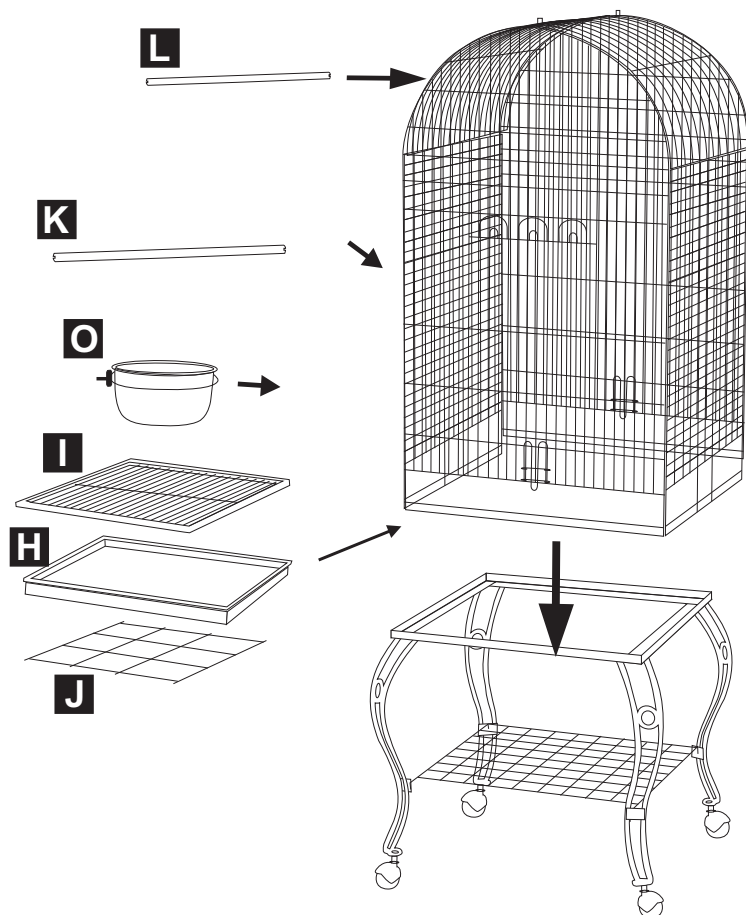

Open Roof Top (Hook the bottom of 1 roof top piece to the top of 1 side panel (use the top piece end without the tab – hook to tab on side panel). Hook one end of the other roof piece to the top of the roof piece just attached tot the side panel (again, use 1 end will have a tab and the other will not). Finally, hook the remaining end of the last roof piece to the top of the other side panel. NOTE: The tabs on the top piece that meet the front and rear panels should be inside of those panels. Once all the top pieces are in place, you may bend the tabs slightly for a tighter fit.

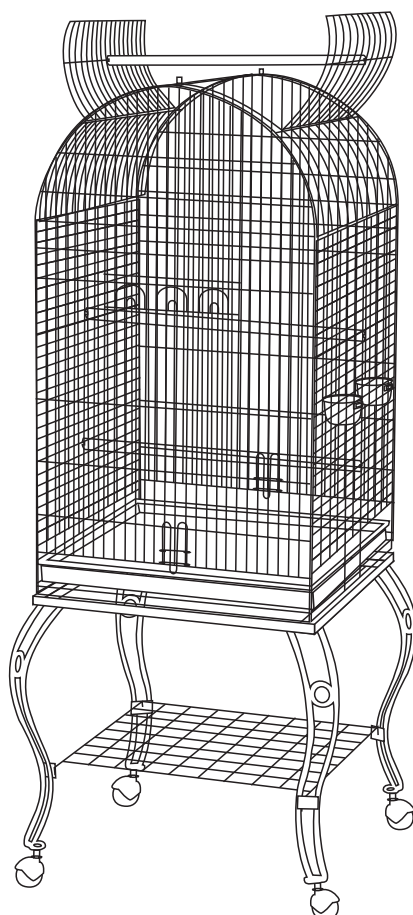

Attach the legs to the bottom of the base using bolts and nuts (the casters may already be attached to the legs, if not attach using hardware on casters). The lip of the base should be opposite to where the legs attach (the lip helps secure the cage to the base once set in). Attach 4 posts shelf's (posts down) to legs

Once the cage and stand is assembly, place the cage on the base (inside the lip). Take the shelf with the 8 posts (4 posts on two ends). The posts should be facing down and towards the front and the rear of the cage. Place the shelf in the opening below the door where the tray will go into. Rest the posts on the front and rear horizontal bars until the shelf is in place for tray slides/this shelf. The flat grate (no posts) slides in on tabs on the bottom of the side panels above the tray.
